

COMPOST EDUCATION

PROJECT GOALS & PROJECT SIGNIFICANCE

Our goal for Compost Education is to educate residents and CSU students and staff of the importance of composting. We are also focusing on educating our viewers on what composting is, why they should consider composting, what they need to compost, and how to start composting at home!

BACKGROUND & CURRENT PRACTICES AT HDS

CSU itself does an outstanding job at composting and they wouldn't be able to do it without students/staff composting, and good old Oscar. "Oscar" is an Earth low in-vessel composter that can process up to 2000 pounds of compostables/day!

At nearly each resident hall there is a compost bin indoors where students can dispose their food waste correctly.

There are also countless compost bins throughout the entire campus!

Composting is practiced on a day to day basis and HDS does an outstanding job at organizing it all!

PROGRESS/UPDATE

Of course, it has been a challenge reaching out to students at this time due to the current pandemic. Nevertheless, Eco Leaders continue to form new methods to outreach students. One method we have turned to are social media platforms mainly being the CSUHalls instagram page.

It brings sadness to our hearts not being able to put on events for our students as we previously planned but we are trying out new methods and getting creative to further engage students.

OUTSTANDING ACTION ITEMS/QUESTIONS TO BE ANSWERED

Brooke and I will be participating in a CSUHalls instagram take over on Thursday, April 22nd. Here we will take advantage of the time we have to spread information about composting and how students can get started at home, if interested and able.
